Math and literacy software for schools

Grafari and Calcularis

The AI-based learning software for training students aged 6 and older in overcoming learning difficulties, such as dyslexia and dyscalculia, to master fundamental skills in math, writing, and spelling.

grafari
by Constructor

Grafari will help your students conquer challenges in reading, spelling, and writing with engaging exercises and evidence-based techniques. Grafari focuses on activating different regions of brain to train and automate writing and orthography skills. The app activates auditory and visual sensory channels to help build stronger connection between spoken and written language: words are learned with the help of color, shape, sounds and structures.

calcularis
by Constructor

Calcularis, the scientifically proven software offers personalized exercises and interactive activities that make learning math enjoyable and effective. Helps practice mathematical operations. Numbers are displayed as digits, blocks and colours - thus multisensory training involves different regions of brain in learning math.

Scientifically proven

Apps are built on evidence-based research, ensuring academic success through the most effective learning methods for dyslexic and dyscalculia children.

Personalized learning

Each student receives a customised learning journey, addressing their specific needs and learning pace.
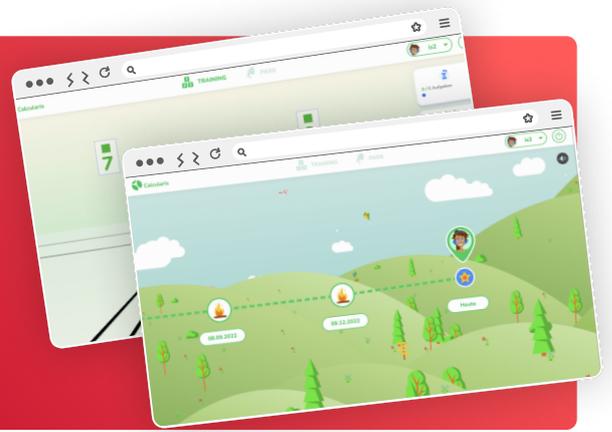

Teacher support

We provide resources and insights to assist teachers in maximising the apps' benefits in the classroom.

Engaging content

Our interactive exercises and games make learning fun and motivate students to stay engaged.

Technical integration

Get started right away!
No IT resources or integrations required.
The software is accessible through web browsers.

Set up time – up to 1 hour!
